

USING KV2 AUDIO ES & VHD SUBWOOFERS WITH ESD AND ESP 4000/2000 AMPLIFIERS

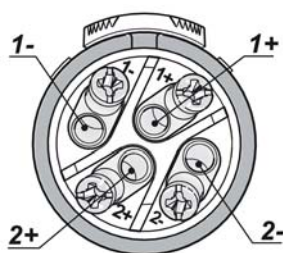

When it is the intention to utilize existing ES or VHD subwoofers with the ESD range of mid-hi enclosures, using the ESP4000/2000 Amplifiers will require a speaker lead converter, because the ES/VHD subwoofers are connected via 4-pole Amphenol connectors, whilst the ESD enclosures and speaker outputs of the ESP4000/2000 are made via 4-pole Speakon connectors.

Please see below the diagram to explain how to do this:

Speakon NL4

Speakon NL4 wiring

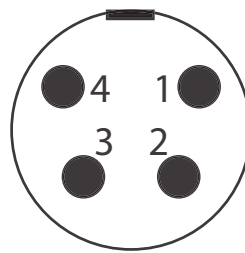

positive pin
(1 +, 2 + parallel)

negative pin
(1 -, 2 - parallel)

Amphenol AP4

Amphenol AP4 wiring

positive pin
(3, 4 parallel)

negative pin
(1, 2 parallel)
